

## **SW 24 Earns Microsoft Gold Certification**

**New York, NY April 14, 2010.**

SecureWatch24 announced today that it has attained Gold Certified status in the Microsoft Partner Program. As a Gold Certified partner SecureWatch24's proven record of effective results in security management now fuses Microsoft's platform to enable process automation, portal solutions, and enterprise content management solutions that address crime reduction initiatives, including counter-vandalism, to help prevent and detect potential threats.

In addition, SecureWatch24 capabilities also include Microsoft's sophisticated line of Office Business Applications, services that further assimilate Office productivity applications and the legacy line of business applications, enhancing extensive on-site training for clients. This dramatically enhances corporate productivity by automating manual work tasks, improving collaboration and the accessibility of real-time information management.

"In a community that is becoming increasingly challenged by ad hoc solutions for specific threats, having a common platform that offers a scaleable and reliable data infrastructure provides our clients with an even more dependable comfort level of safety and property protection that can address unique issues and needs within virtually any setting," said Desmond Smyth, president of SecureWatch24.

The advantage of having a Gold Certified status as a Microsoft Partner is in strengthening the company's ties with world class strategic partners and client organizations alike. Client companies whose IT departments are already established on a Microsoft foundation now have a more complementary data partnership. "This certification demonstrates our commitment to Microsoft products and the growing reliability of its services. This certification continues to emphasize our unique blend of business expertise and experience, while improving communication with our clients," added Gene Dellaglio, senior vice president, chief technology officer.

"When dealing in technically complex environments, we like to minimize problems and maximize solutions," offered Frank Santamarena, vice president, business development, "and Microsoft offers the right combination of flexible ingredients that works for both our clients and for us."

SW24 installs, implements, maintains, and services facility-specific surveillance and access control systems for the purpose of enhancing physical plant security and data accessibility. Securewatch24 [www.securewatch245.com](http://www.securewatch245.com) has achieved recognition as New York City's premier commercial and residential real estate security company. Its specialization in property surveillance and facilities management has fostered an effective partnership with investment property owners and management.
